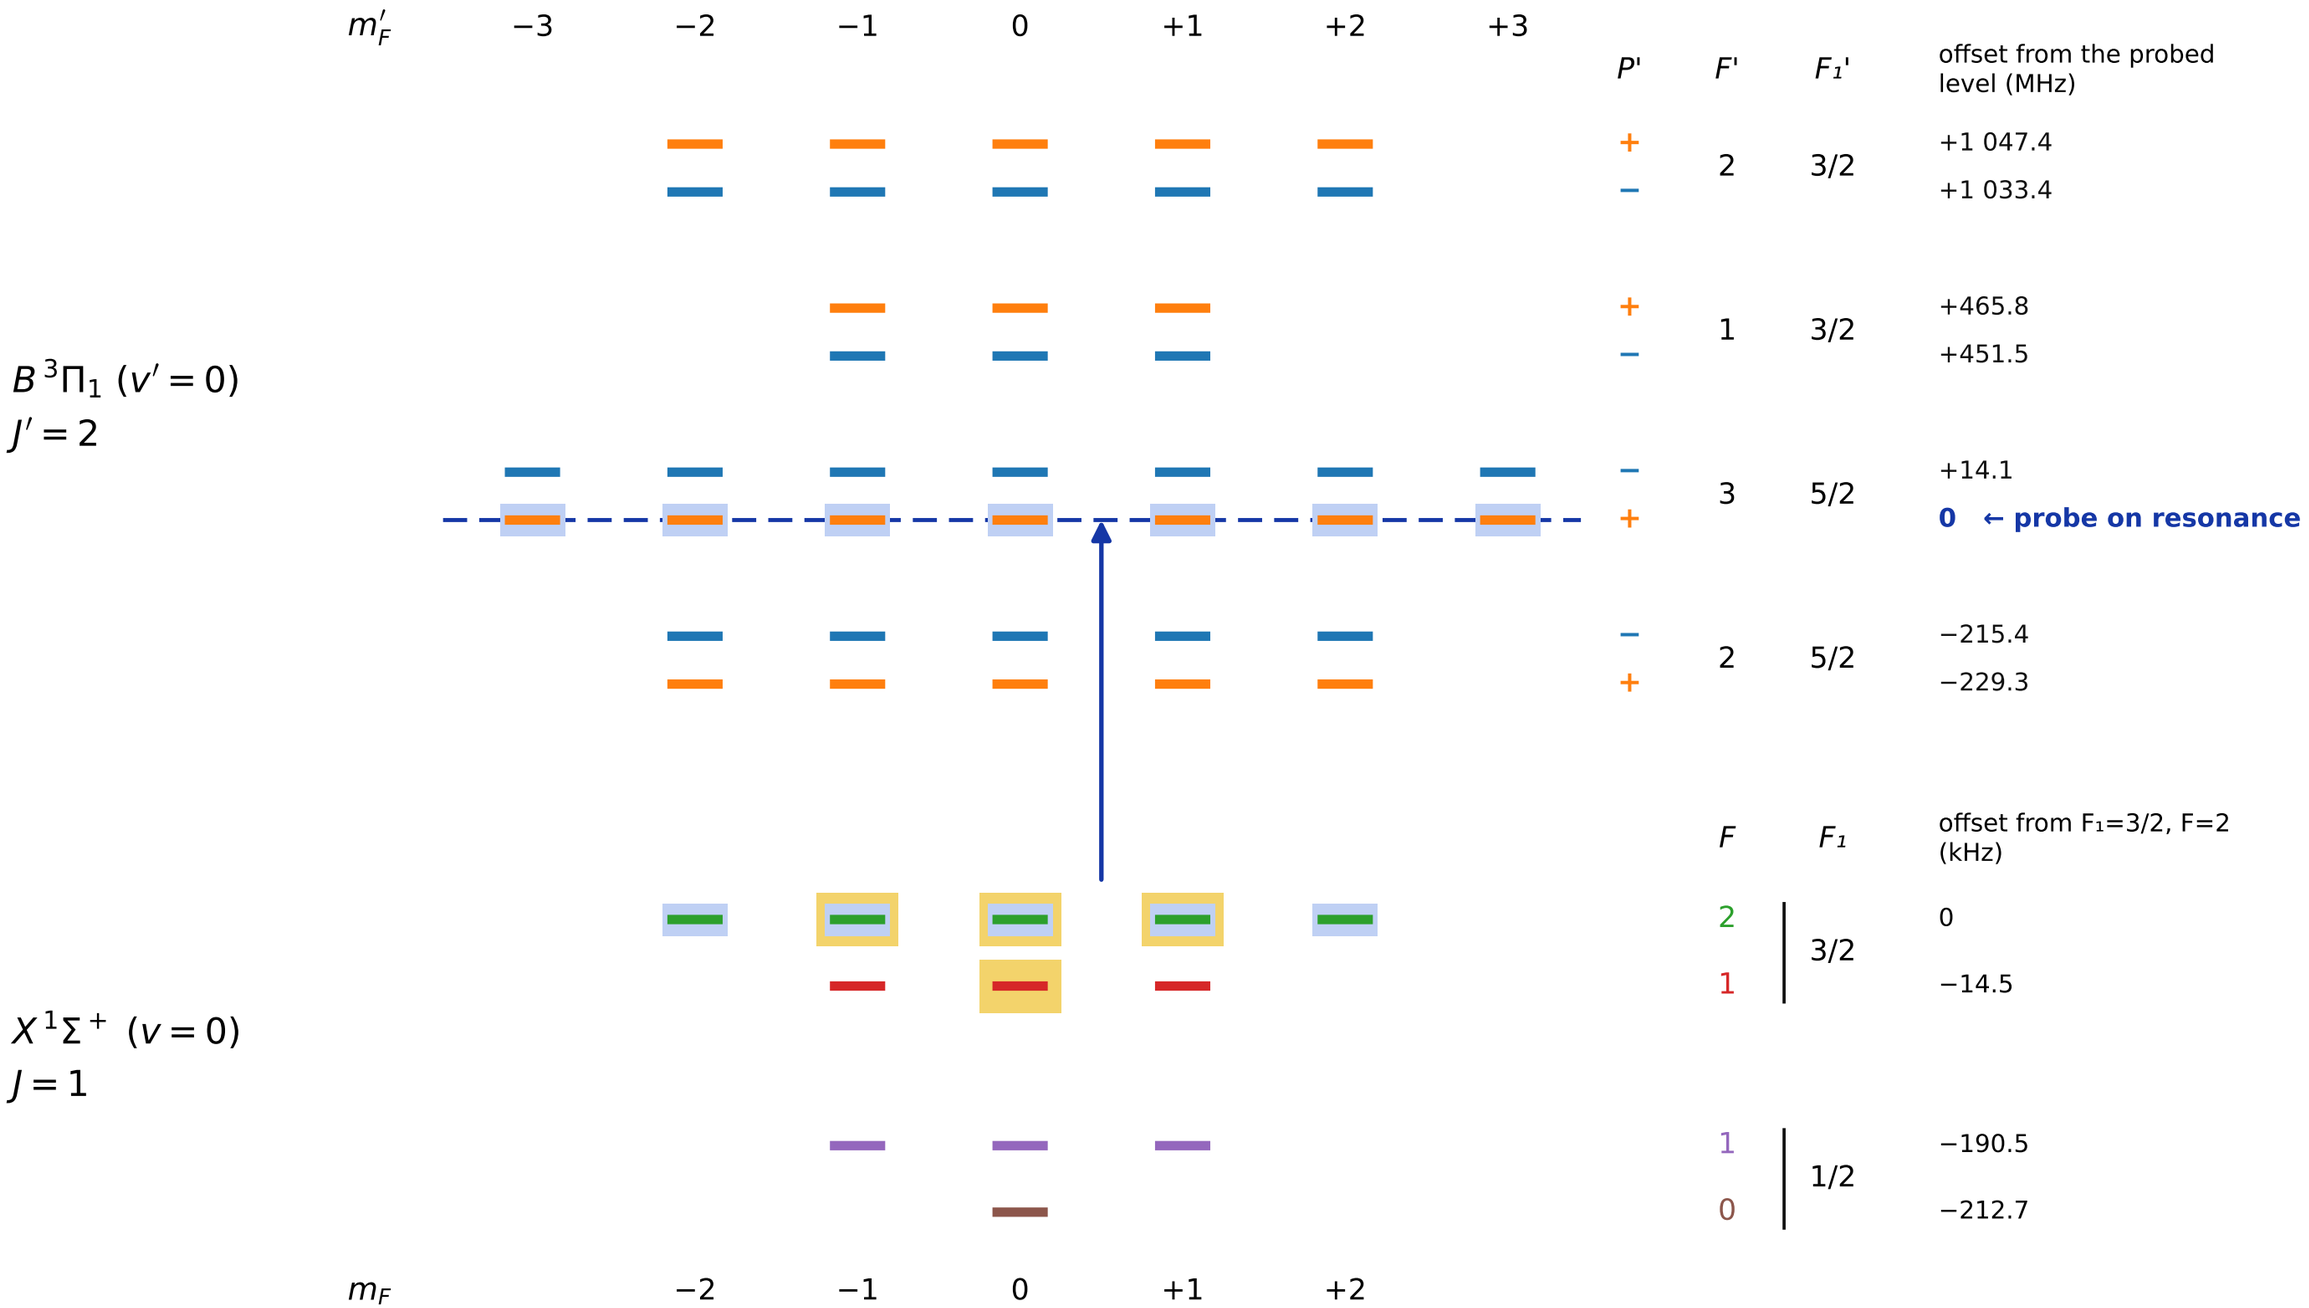
Detection | R(1) F₁'=5/2, F'=3 | E = 0 | probe 1.5 cm high, single frequency



Blue dashed line: probe on resonance with |F₁'=5/2, F'=3, P'=+⟩, single frequency, any linear polarization.
Blue highlight: sublevels that couple to the probe (on B: driven; on J=1: excited by the probe).
F'=3 decays inside J=1 only to F=2: no dark state, every F=2 sublevel is detected.
Yellow: populated with CU1 off (AP1).
Levels in energy order, not to scale; right columns: offsets in MHz (B) and kHz (X).
